Filter   Smack

View Controller - A controller that manages a view.

Storyboard Reference - Provides a placeholder for a view controller in an external storyboard.

Navigation Controller - A controller that manages navigation through a hierarchy of views.

The screenshot shows the Xcode interface with the storyboard editor open. The main canvas displays a login screen for an application named "Smack". The screen features a logo with a speech bubble containing a question mark and exclamation point, followed by the word "Smack". Below the logo are two text input fields labeled "username" and "password". A large blue "Login" button is centered below the inputs. At the bottom of the screen, there is a link that says "Don't have an account? Sign up here". To the right of the storyboard, the "Properties" panel is visible, showing simulated metrics for the iPhone 6s (inferred size, status bar, top bar, bottom bar). Below the metrics, the "View Controller" section is expanded, showing options for title, initial view controller status, scroll insets, and edge extension settings. A context menu is open over the "Login" button, displaying segue options such as "Show", "Show Detail", "Present Modally", and "Push (deprecated)". The bottom of the interface shows the "Key Commands" section and the "Document Outline" with a "Smack" entry. The bottom toolbar includes standard Xcode icons for file operations and zooming.
