Web request and API

Section 11, Lecture 80

[Go to Dashboard](#)

The image is a collage of four screenshots illustrating web requests and APIs:

- Pokéapi (Top Left):** The homepage of the RESTful Pokémon API. It features a dark header with "Pokéapi v2 BETA" and "The RESTful Pokémon API". Below the header, it says "Over 192,974,700 API calls received!". The main content area includes a message about the API's purpose, a "What's new in V2? Check out the docs!" link, and a "Try it now!" button. Underneath, there's a code snippet for a resource named "Bulbasaur".
- OpenWeatherMap (Top Right):** The homepage of OpenWeatherMap. It features a banner with the text "We Deliver 1 Billion Forecasts Per Day" and "1,000 new subscribers a day | 700,000 customers | 120+ weather APIs". Below the banner, there's a search bar labeled "Your city name" and a "Search" button. The main content area shows "Current weather and forecasts in your city" for "Weather in London, GB", including a temperature of 15°C, a chart showing temperature and precipitation over 24 hours, and detailed weather data like wind, cloudiness, and pressure.
- Video Player (Bottom Left):** A video player interface showing a man with a beard speaking. The video progress bar indicates the current time is 3:06 / 8:54.
- iPhone Screenshot (Bottom Center):** An iPhone displaying a messaging app. The screen shows a list of messages in the "#general" channel between users "Emma" and "jonnyb". The messages are:
 - Emma Jul 13, 2:49 PM Hey Jonny! What's going on?
 - jonnyb Jul 13, 2:50 PM Oh you know! Just learning how to code with Devslopes!
 - Emma Jul 13, 6:15 PM that's what's up!
 - Emma Jul 14, 1:26 PM Hello students!!
 - Emma Jul 14, 4:43 PM hi
 - Emma Jul 16, 11:58 PM Hey there everyone!A message input field at the bottom is labeled "Message: #general".
